RCLCPP

Parameters

Part 1

Getting Started

```
int main(int argc, char ** argv)
{
    rclcpp::init(argc, argv);

    auto node = std::make_shared<rclcpp::Node>("minimal_param_node");
    auto my_string = node->declare_parameter("my_string", "world");
    auto my_number = node->declare_parameter("my_number", 23);

    rclcpp::spin(node);
    rclcpp::shutdown();
}
```

Parameter Struct

```
struct Params {  
    std::string my_string = "world";  
    int my_number = 23;  
};
```

Parameter Struct

```
struct Params {  
    std::string my_string = "world";  
    int my_number = 23;  
};  
  
int main(int argc, char ** argv)  
{  
    rclcpp::init(argc, argv);  
    auto node = std::make_shared<rclcpp::Node>("minimal_param_node");  
    auto params = Params{};  
    params.my_string = node->declare_parameter("my_string", params.my_string);  
    params.my_number = node->declare_parameter("my_number", params.my_number);  
  
    rclcpp::spin(node);  
    rclcpp::shutdown();  
}
```

```
auto param_desc = rcl_interfaces::msg::ParameterDescriptor{};
param_desc.description = "Mine!";
param_desc.additional_constraints = "One of [world, base, home]";
params.my_string = node->declare_parameter("my_string",
    params.my_string, param_desc);
```

```
auto param_desc = rcl_interfaces::msg::ParameterDescriptor{};
param_desc.description = "Mine!";
param_desc.additional_constraints = "One of [world, base, home]";
params.my_string = node->declare_parameter("my_string",
    params.my_string, param_desc);
param_desc = rcl_interfaces::msg::ParameterDescriptor{};
param_desc.description = "Who controls the universe?";
param_desc.additional_constraints = "A multiple of 23";
params.my_number = node->declare_parameter("my_number",
    params.my_number, param_desc);
// ...
```

```
auto const _ = node->add_on_set_parameters_callback(  
    [](std::vector<rclcpp::Parameter> const& params)  
-> rcl_interfaces::msg::SetParametersResult {
```

```
auto const _ = node->add_on_set_parameters_callback(  
    [](std::vector<rclcpp::Parameter> const& params)  
-> rcl_interfaces::msg::SetParametersResult {  
    for (auto const& param : params) {  
        if(param.get_name() == "my_string") {  
            auto const value = param.get_value<std::string>();
```

```
auto const _ = node->add_on_set_parameters_callback(
    [](std::vector<rclcpp::Parameter> const& params)
    -> rcl_interfaces::msg::SetParametersResult {
    for (auto const& param : params) {
        if(param.get_name() == "my_string") {
            auto const value = param.get_value<std::string>();
            auto const valid = std::vector<std::string>{"world", "base", "home"};
            if (std::find(valid.cbegin(), valid.cend(), value) == valid.end()) {
                auto result = rcl_interfaces::msg::SetParametersResult{};
                result.successful = false;
                result.reason = std::string("my_string: {")
                    .append(value)
                    .append("} not one of: [world, base, home]");
                return result;
            }
        }
    }
```

- parameter name: 6 separate copies
- declaration: re-init description for each parameter
- validation: convert vector to map

30 lines of C++ boilerplate per parameter

30 lines of C++ boilerplate per parameter
Before handling of dynamic parameters

generate_ parameter_library

Part 2

```
minimal_param_node:
  my_string: {
    type: string,
    description: "Mine!"
    validation: {
      one_of<>: ["world", "base", "home"]
    }
  }
  my_number: {
    type: int
    description: "Mine!"
    validation: {
      multiple_of_23: []
    }
  }
```

```
find_package(generate_parameter_library REQUIRED)

generate_parameter_library(
    minimal_param_node_parameters
    src/minimal_param_node.yaml
)

add_executable(minimal_node src/minimal_param_node.cpp)
target_link_libraries(minimal_node PRIVATE
    rclcpp::rclcpp
    minimal_param_node_parameters
)
```

```
#include <rclcpp/rclcpp.hpp>
#include "minimal_param_node_parameters.hpp"

int main(int argc, char * argv[])
{
    rclcpp::init(argc, argv);
    auto node = std::make_shared<rclcpp::Node>("minimal_param_node");
    auto param_listener =
        std::make_shared<minimal_param_node::ParamListener>(node);
    auto params = param_listener->get_params();

    // ...
}
```

Built-In Validation Functions

- bounds (inclusive)
- less than
- greater than
- less than or equal
- greater than or equal

- bounds (inclusive)
- less than
- greater than
- less than or equal
- greater than or equal
- fixed string/array length
- size of string/array length greater than
- size of string/array length less than
- array contains no duplicates
- array is a subset of another array
- bounds checking for elements of an array

```
#include <rclcpp/rclcpp.hpp>
#include <fmt/core.h>
#include <tl_expected/expected.hpp>

tl::expected<void, std::string> multiple_of_23(
    rclcpp::Parameter const& parameter) {
    int param_value = parameter.as_int();
    if (param_value % 23 != 0) {
        return tl::make_unexpected(fmt::format(
            "Invalid value '{} for parameter {}. Must be multiple of 23.",
            param_value, parameter.get_name()));
    }
    return {};
}
```

Boring?

Part 3

Why so many parameters?

- Users use defaults for most parameters

Why so many parameters?

- Users use defaults for most parameters
- Authors only test default values

Why so many parameters?

- Users use defaults for most parameters
- Authors only test default values
- Permutations of parameters grow exponentially

Why so many parameters?

- Users use defaults for most parameters
- Authors only test default values
- Permutations of parameters grow exponentially
- The more complex your interface the less useful your abstraction

Why so many parameters?

- Users use defaults for most parameters
- Authors only test default values
- Permutations of parameters grow exponentially
- The more complex your interface the less useful your abstraction
- Resist the urge to expose interior details as parameters

What is a good parameter?

- Express user intent (latency or throughput)

What is a good parameter?

- Express user intent (latency or throughput)
- Details like buffer sizes scale with hardware

What is a good parameter?

- Express user intent (latency or throughput)
- Details like buffer sizes scale with hardware
- Leave the door open to improvements in behavior for the user

Questions?
